Week 5 | Scope and Findings

1 · Process scope
This model shows the current appointment process from the visitor requesting an appointment through Scheduling, Clinical Operations and Intake. The process starts when a visitor requests an appointment and ends when intake either moves the visitor forward or begins exception review. Roles included are Visitor, Scheduling, Clinical Operations and Intake. Changes or improvements to the system are outside the scope of this current process model.

2 · Check the two paths
In the ordinary path, the request is recorded, missing information is clarified if needed, Clinical Operations checks readiness and Intake checks the appointment status when the visitor arrives. In the incident path, a held slot was recorded and a booking confirmation was sent but Intake still showed the appointment as held when the visitor arrived. W05-S04 shows that the available trace doesn't contain a completed readiness decision reaching Intake before arrival. The evidence shows the records disagree, but it doesn't prove why the readiness decision was missing.

3 · Evidence and model review
The model is supported by W05-S01 for Scheduling, W05-S02 for Clinical Operations, W05-S03 for Intake and W05-S04 for the incident record review. I checked the model against the records and kept the readiness handoff marked as unclear instead of making up a missing step. The remaining uncertainty is why the completed readiness decision didn't reach Intake before the visitor arrived. Clinical Operations and the record review would be needed to resolve that.

4 · Learning reflection (reuse your Discord paragraph)
The process became clear because I could se which department is responsible for each step and where the handoffs occur. The main unclear point is the readiness handoff because W05-S04 shows that Intake still saw held even though a booking confirmation had been issued. This proves model is different from Week 4 because it described what the system must do, while this model shows how the work actually happens now and where the current process can break down.

5 · Portfolio evidence
