CIT 140 · Week 4 · Cedar Junction

Validated Requirements Set

Validated Requirements Set · Revision 4582

R-01 · functional

Requirement: The system must clearly clearly show the difference between a held appointment and a ready appointment.

Source: W04-S01 · Dana Ruiz

Rationale: Intake and Scheduling use "held" differently, so staff need to know which situation actually applies before moving forward.

Acceptance check: Given an appointment that is held, when staff view it, then the system clearly shows why it is held and whether it is ready to move forward.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Held means the visitor or appointment can't move forward yet while heady means all required conditions are met and the appointment can proceed.

R-02 · user

Requirement: Staff must be able to see what the current status means, who changed it and what approved step comes next.

Source: W04-S01 · Dana Ruiz

Rationale: Right now staff have to call around for answers while the visitor waits.

Acceptance check: Given an unclear status, when staff open the appointment, then they can see the condition, who changed it and next approved step.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Held means the visitor or appointment can't move forward yet while heady means all required conditions are met and the appointment can proceed.

R-03 · business

Requirement: The system must only allow a same day slot to be offered when both a room and a qualified clinician are available.

Source: W04-S02 · Dr. Lena Okafor

Rationale: An open time on the calendar doesn't automatically mean the clinic is actually ready.

Acceptance check: Given a same day opening, when either a room or qualified clinician is unavailable, then the system doesn't allow the slot to be offered.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: An appointment should only be considered ready when a room and qualified clinician are available. A confirmation by itself doesn't mean it is ready.

R-04 · functional

Requirement: The system must update the appointment status when readiness changes and show staff what action is needed next.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Staff and the visitor need updated information if something changes after the appointment was confirmed.

Acceptance check: Given a confirmed appointment, when readiness changes, then the system updates the status and shows staff the next approved step.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: An appointment should only be considered ready when a room and qualified clinician are available. A confirmation by itself doesn't mean it is ready.

R-05 · user

Requirement: The system must keep the visitor's communication preferences and approved support needs with the appointment through confirmation, rescheduling and check in.

Source: W04-S03 · Priya Shah

Rationale: The visitor should not have to explain the same communication or support needs again at each step.

Acceptance check: Given a visitor with a saved communication or support need, when the appointment moves through confirmation, rescheduling, or check-in, then authorized staff can still see the information.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: The visitor's language, communication and approved support needs should stay with the appointment through confirmation, rescheduling and check in so they don't have to repeat them.

R-06 · constraint

Requirement: The system must provide a phone or staff-assisted option for visitors who can't use the portal.

Source: W04-S03 · Priya Shah

Rationale: Access to the service shouldn't depend on being able to use one digital option.

Acceptance check: Given a visitor who can't use the portal when they need help with the appointment, then they can complete the needed step by phone or with staff assistance.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: The visitor's language, communication and approved support needs should stay with the appointment through confirmation, rescheduling and check in so they don't have to repeat them.

R-07 · nonfunctional

Requirement: The system must only show the minimum information needed on shared displays.

Source: W04-S04 · Jordan Kim

Rationale: This protects private information while still giving staff what they need to do their job.

Acceptance check: Given a shared display, when staff view a status, then only the minimum needed information should be shown.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays should only show the minimum information staff need while the sustem keeps a history of who changed a status, the old and new value and the time of change.

R-08 · functional

Requirement: The system must keep a history of who changed a status, the old value, the new value and the time it was changed.

Source: W04-S04 · Jordan Kim

Rationale: This makes it possible to see what happened if there is a problem or question later.

Acceptance check: Given a status change, when the history is reviewed, then it should show who made the change, the previous value, the new value and the time.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays should only show the minimum information staff need while the sustem keeps a history of who changed a status, the old and new value and the time of change.

Professional Guidance Assessment

IIBA: IIBA is a professional association that gives guidance on how business analysts identify needs, work with stakeholders and develop requirements.

ISO/IEC/IEEE 29148: Together, they publish ISO/IEC/IEEE 29148, which gives guidance for writing requirements that are clear, complete and able to be checked.

PMI: PMI focuses more on managing and delivering projects while Week 4 is focused specifically on creating and checking system requirements.

Application: The guidance helped me make R-08 more clear and checkable by stating exactly what information the system has to keep when status changes.

Prepared in Command Nexus. Canvas remains the official submission point.
